

Pediatric Endoscopic Endonasal Skull Base Surgery: A Comprehensive Guide for Parents and Caregivers

What is Pediatric Endoscopic Endonasal Skull Base Surgery?

Pediatric endoscopic endonasal skull base surgery is a minimally invasive procedure used to treat a variety of skull base tumors in children. The surgery is performed through the nose, using an endoscope, which is a thin, lighted tube. The endoscope allows the surgeon to see the tumor and remove it without making a large incision in the face or skull.
